

DATOS DIGITALES

valores de 1 o 0 dígito binario o bit (2 posibles valores)

digitalRead();
digitalWrite();

DATOS ANALOGICOS

rangos variables Arduino procesa datos de 0 a 1023 (2^10)

analogRead();
analogWrite();

BITS DE INFORMACION

MODULACIÓN DIGITAL POR ANCHOS DE PULSOS (PWM)

EJERCICIO 3: SENSOR DE LUZ (DIGITAL IN)

EJERCICIO 4: SENSOR DE SONIDO (ANALOG IN)

EJERCICIO 5: SENSOR DE PROXIMIDAD (PULSE IN)

DATOS DE PULSO

lee el pulso generado a partir de un pin y lo transforma en datos analógicos

pulseIn(pinE, HIGH);
